Group:

Theres a website for "Dave's Online Hamfest",listing bunch of manuals,commenting other stuff to follow.Last year he ran long list of parts but would not respond to my e mail,phone calls, snailmail.I drove up to try and find his house and ran into a crazy semi naked neighbor who ran out into road in front of my car and threatened violence against me,so left ASAP and did not try again to visit Dave's house in NC neighborhood.I am persistent but not willing to fight Dave's neighbor.

This whole thing is so ironically humorous,I wonder if anyone else has actually done business with" Dave",and what he had to go through to do so?He does list some useful manuals. 73,John Freeman,W7KPB

In general, BAs are cheap. Only a few, highly sought-after models command big bucks. And even those prices are reasonable if adjusted for inflation, as Bob points out. On one point however, I have to disagree:

"the relative obscurity of any collectible (not just radios) is the biggest factor in determining it's
> value."
>

This is clearly not true for boatanchors. The most costly (as opposed to valuable) BAs today are Collins gear. Yet none of the BAs that Collins ever made are in any way rare except some of the 1930's transmitters. The statement that rarity is the biggest factor in determining value implies that "supply" establishes value without being related to "demand."

"And we all know that the "worth" of something is what someone is
> willing to pay for it!"
>

This is closer to the mark. Collins gear is costly because it is highly sought after and people are willing to pay more because they know that it is a competitive marketplace.

The last issue of ER talked about the BC-325 transmitter of early-W.W.II fame. The BC-325 is a rare item for sure. I know of about 5 that exist today and there can't be many more than that. But you can buy one for less than 1/10th of what you would pay for a Collins KW-1 of which some 60 or 70 are known to exist.

Demand and supply establish value together. If 50 examples of a particular radio exist, but only 30 people want that radio, then it's hamfest junk box fodder. Now if 1,000 collectors want those 50 sets, the only place you'll find one is on eBay--and it won't be cheap.

Content-Transfer-Encoding: 7bit

I received three responses (make it a sphere, pack diagonally, see below*), and there was one posted today, so you can guess the interest isn't too strong..

The string idea is a good one.

The largest area of a rectangle (H x W) is when the rectangle is a square (H=W). So for any length of the box L, the particular box with the largest volume would be the maximum (Postal Service) allowed (length+ girth) minus the desired length and the remainder divided by 4.

As an example, for Spain with a limit of 79 inches, if you needed a length of 19 inches to fit a component, then the final dimensios to maximize the volume of the box would be 19 x 15 x 15.

Anyone calculate the box of maximum volume, with NO given dimension that meets the 79 inch rule? is it the cube root of 79?

Jose, see what we go through!

Herb Rosenthal W5AN

* One response: When I recently shipped a SCR 522 radio case to a friend in The Netherlands , the postal folks very carefully measured the length and girth of my box and though it was a 1/8 " more than what they called for I was

able to convince the postal clerk that it would not cause the ship to sink
that would be carrying it. USP will not budge...or just barely.

Hi All,

I recently bought a set of Morrow twins including the MB-560 transmitter and MBR-5 receiver. I've been listening to some 40 cw and 75 AM and ssb with the receiver and will be wiring up the mic connector in preparation for some 75 meter and 10 meter AM (and I will be doing some 80 and 40 meter cw with them also).

Has anyone ever seen the AC power supply for this set? I think its an odd wedge shapped cabinet.

These Morrows have some scratches along the cabinet top where the units were actually installed under the dash of some big ole cruiser in the 50's. Did any of you guys have a Morrow setup under your dashboard?

Anyone out there actually using Morrows on the air? I'd like the opportunity to talk with some folks who have experience with these rigs.
Thanks,

73,

Scott WA9WFA

I need a power supply, manual copy and any info on the WRL SB-175 "Meteor" HF transceiver. I'd buy a junker unit if it had a complete power supply.

Any help appreciated.

Thanks.

Hi George. I'm sure you will get some varying replies here, so let me add mine to the variance <g>.

You may be making too much out of this capacitor replacement thing. Look at the practical side. Capacitors in the sizes and voltages we need them are not cheap. So rather than search for the exact type useful in every situation, consider what you are willing to pay for. I maintain a stock of Sprague orange drops, disc ceramics and electrolytics. Between them, these 3 types cover virtually every replacement situation that I run into. So I don't ever buy anything else. Maybe that's a bad habit. But this is just a hobby and I'm allowed to be lazy if I wanna be.

Are you willing to build a stock of caps by buying a wide variety of cap types to fit every possible replacement situation? Or will you just buy caps as you need them for each project? I can see the reasoning behind these approaches. But either one would break the bank at my house. So I'll stick with my bad habits.

That's my two cents.

When I was a little kid in Upper Michigan, the "MAN" on 75 AM mobile was
George - W8HAU, using his Morrow twins. He always seemed to be louder than
any other mobile station, and he heard very well. Obviously he also knew a
thing or two about antennas.

Go to the following URL to see a JPG of the QSL card he sent me for a a 1959 QSO. I was KN8MFO operating CW in the 80 meter Novice band, and W8HAU was on 3920, working me crossband. He had just stopped at our house for some coffee, and I was "mobiling him home". The Morrow twins in the JPG take up a bunch of space under the dashboard!

I recently visited my local distributor and bought a bunch of capacitors to finish off my HR0-50. I have no idea how old some of these are, since the firm has been there in Rockford since the 1920's. One of them, a CDE tubular, is a 0.47 mfd at 200 vdc cap, marked "super pup" with a model of mpy-2p47." Is this one of the celebrated black beauties? It is black in color. I hate to replace the dripping old wax paper caps with something just as bad, if I can avoid it.

Dave seems like a perfectly reasonable and intelligent guy to me (well, as much as any other ham with a garage full of Heathkits). I've bought BA stuff from him at home and at hamfests. He's a helpful friendly guy in person - don't know about his semi-nekkid neighbors.

I've worked him on 80m AM and 432MHz ATV. He's an VHF/UHF technician/engineer in Real Life, I think.

Where I grew up Elmac and Gonset were the mobiles of choice. W5WYN had the AF-54H and PMR-6 then upgraded to the AF-67 and PMR-7. We use the Gonset Twins on field day and hooked to a beam ran piles ups on 15 and 10 AM.

There was a ham in New Orleans who had the morrow equipment mounted as per the QST ad...in a side table next to his couch with the gear facing up. Never saw one mobile. Ditto for the Palco Bantum. There were some nifty small AM rigs. I have the Babcock MT-5B (not restorable sigh) but there was never a matching RX. Maybe the Gonset Super six huh!

You may be in trouble. You will have to measure the insulation resistance of all of those oldies. They are doubtlessly OIB (old in the box) caps. I wouldn't use them in anything but low voltage, low leakage sensitivity circuits (like cathode resistor bypass) if their resistance is below 100 megohms/microfarad. That means, for example, a .01uF capacitor should be 10,000 megohms or greater. For high impedance, high voltage, leakage critical circuits like plate-grid coupling, use new caps only. And keep in mind, some of your oldies, if subjected to high voltages, may just up and short after a few hours of operation.

Someone said caps aren't cheap. I disagree. Buying caps from Mouser, for example, cost 20 cents to a dollar each typically. Old radios deserve a few bucks of investment, IMHO.

CDE is still in business (<http://www.cornell-dubilier.com/>). That part number is consistent with their present system, but they don't make any MPY series caps anymore.

I wouldn't use any cap that isn't epoxy sealed. That could either be a wrap and fill (like CDE's yellow WMF series) or an epoxy dipped (like Orange Drop). Also, most of these are made with plastic dielectrics, rather than wax paper. The plastic ones have lots of advantages, although properly sealed paper has it's place as well. AES has very economical wrap and fill plastic caps, or you can pay more for Orange Drops.

Any molded paper capacitor is to be avoided. Be it Micamold Tropicaps, Sprague Black Beauties, etc. The molded case did not make a hermetic seal against moisture (at the leads), and sooner or later moisture will get into the paper and make the cap leaky. Save them for the audiophiles who think they will make their amp sound just like it did in 1955. (Wrong, Saul Marantz did not design the amp around leaky caps!)

The only caps made in the 1950's that are as reliable as today's epoxy sealed ones were the ones in metal cases with hermetic glass seals. Only

the military and aerospace industry could afford those.

Gang-

Here are the real basics of how to keep me happy, the list noise-free, and everyone able to enjoy BoatAnchors... Simple, easy, workable...

Do not send SPAM-type e-mail messages to the list.

Do not send attachments (attached files) of *ANY* sort to the list. This includes HTML shortcuts, v-cards, GEDCOM files, zipped files, and *ANY* other type of attachment.

Do not EVER forward virus warnings (which are 99%hoaxes) or send chain letters to the list.

Do not use HTML or RTF (rich text format) in messages sent to the list.

DO keep e-mail messages to the list on topic and appropriate.

Do not post commercial messages.

Please refrain from posting "Ebay" type auction notices. Refrain from "seen on EBAY" posts...

DO be polite.

Do not flame other members of the list.

DO be considerate of the list members and list resources.

DO have fun!

I guess it depends on what you call cheap?....Personal opinion.....orange
drops are a waste of money.....Poly & Mylars are just as accurate in
tolerances and will last just as long or longer.....they are cheap....
I think I pay \$0.20 for .001's .003's.....maybe up to \$0.75 for a 0.5Mfd all
600 volters.....
10 Mfd litics are 85 cents.....maybe 22 mfd's are a buck....

Subject: RE: Capacitor Confusion
CC: john <johnmb@mindspring.com>

received a couple of requests for WHere do I get my Caps.....so.....

Mark Oppat

Antique Audio is what he calls it.....

e-mail is

moppat@flash.net

address is.....

253 Blanche

Plymouth, MI 48170

Tele is 1-313-455-4169 calls between 10AM-9PM EST only please

prices are	each	qty 20+
.001 .0047	.25	.20
.01 .02	.30	.25
.03 .047 .068	.35	.30
.1 Mfd	.50	.40
.22	.65	.55
.47	.85	.65

Litics		
4.7 @450	.60	.50
10 @ 450	.90	.80
10 @ 50	.40	.35
22 @ 450	1.20	1.05
22 @250	.60	.50
22 @ 63	.40	.35
47 @450	2.25	2.00
47 @160	.90	.80
33 @ 160	.60	.50

some of the little caps are "Greenies" some are "Blue Dips" some are tubular yellow Poly's.....

never had any trouble with any of them....

I go other places for other values that Mark doesn't have.....

He also gives you a bit of a break if you go 100 lots a bit better than the 20+ prices listed above.....

He makes several Antique Radio shows a year.....did Dayton a couple of years ago.....but said...geez.....don't "Hams" build anything or fix anything anymore?.....Didn't sell enough to pay him to go back to Dayton.... anyway....thats where I get a lot of mine.....

A big loss for all hamdom. One of the funniest things I've ever read was a
story in CQ magazine by SAI, "The day we boiled the 304t1s."

A sad note!

73's Bill.
